

Gold Slider | jQuery Plugin

version 1.3

Gold Slider is a jQuery plugin showcasing 4 posts at a time in the form of a sliding area. The plugin has the possibility to append more than 4 posts as multiples of 3.

The slider accommodates the latest 4/7/10/13/17 posts from the desired category, all at once. One slide features a primary post, full-page width and three secondary ones, all four having full title and excerpt.

The user is able to add an unlimited number of slides, each of them accommodating 4/7/10/13/17 (or more) posts.

Other options include the autoplay frequency (or lack of it - manual advance) and the width of the slider. It will automatically align in the center of its container. The width field allows for pixel values for fixed width, and percentage for responsive layouts. The slider shrinks up to 20% in order to accommodate any mobile device, and by using background images (CSS : cover), each slide shows the most of its containing image.

The slider allows for more customization such as colours, border type and sliding/easing modes.

The slider allows for customization of colours (titles, text, border and background), border type (for secondary posts) and sliding/easing mode. The border has the default CSS types, **solid**, **dotted** and **dashed**. As a personal preference, I think **solid** looks the best. The easing modes are described as used in the plugin, for example **easeOutQuint** uses an easing motion only when the current slide exits. "Quint" is the mathematical algorithm used by the motion.

Just try them all and pick the most suitable.

```
jswing
def
easeInQuad
easeOutQuad
easeInOutQuad
easeInCubic
easeOutCubic
easeInOutCubic
easeInQuart
easeOutQuart
easeInOutQuart
easeInQuint
easeOutQuint
easeInOutQuint
easeInSine
easeOutSine
```

easeInOutSine
easeInExpo
easeOutExpo
easeInOutExpo
easeInCirc
easeOutCirc
easeInOutCirc
easeInElastic
easeOutElastic
easeInOutElastic
easeInBack
easeOutBack
easeInOutBack
easeInBounce
easeOutBounce
easeInOutBounce

The plugin uses a simple HTML5-compatible structure, which fits all possible configurations.

Doesn't fit your configuration?

1. Make sure you have correctly set the slider width.
2. Contact me and I'll gladly help you.

Features

- HTML5 compliant
- Customizable colours and style
- Unlimited slides
- Unlimited images/slide

Installation

1. Check out the slider.html source and read all comments
