

# Cinnamon Boards | PHP Script

version 2.0.4

**Cinnamon Boards** is a forum/message board PHP script with a light footprint, responsive structure and user accessibility.

The message board uses a single database table, and all information is structured as a forum (with no categories). It can easily be integrated into other scripts or sites, without losing any of its functionality.

**Cinnamon Boards** allows you to create a customized community that rewards positive participation.

All configuration is done via the `forum.variables.php` file:

```
<?php
// set your default timezone (optional)
// see list here: http://www.php.net/manual/en/timezones.php
date_default_timezone_set('UTC');

// set your database details (required)
$host = 'localhost';
$user = '';
$pass = '';
$database = '';

// set your results/page (optional)
$per_page = 10;

// set your reCAPTCHA details (recommended)
define('CB_RC_PUBLIC', '');
define('CB_RC_PRIVATE', '');
// get a key from https://www.google.com/recaptcha/admin/create

// set your Google Analytics tracking code (recommended)
define('CB_GA', 'UA-XXXXXXX-X');

// set skin mode (choose from 'default', 'xbox')
define('CB_SKIN', 'default');

// set maintenance mode // display thread removal links
define('CB_MAINTENANCE', false);
```

```
// set username requirements (4chan style)
define('CB_REQUEST_USERNAME', true);
define('CB_USERNAME_PREFIX', 'anonymous-');

//
mysql_connect($host, $user, $pass);
mysql_select_db($database);
?>
```

Notice the main settings, such as database details, page rendering options, reCAPTCHA API keys, skin and maintenance options.

The maintenance options activate a "Remove" link, useful for administrators or moderators.

## Features

- Responsive (smartphone, tablet compatible)
- HTML5 compatible/valid

## Installation

1. Upload the **cinnamon-boards** folder to your server (rename it as you see fit)
2. Import the attached .sql file in your database
3. Review the options and set the database information in `forum.variables.php` file
4. Start using the boards

If you want to use reCAPTCHA verification, you need a free API key from <https://www.google.com/recaptcha/admin/create>.
