

Cinnamon Users | WordPress Plugin

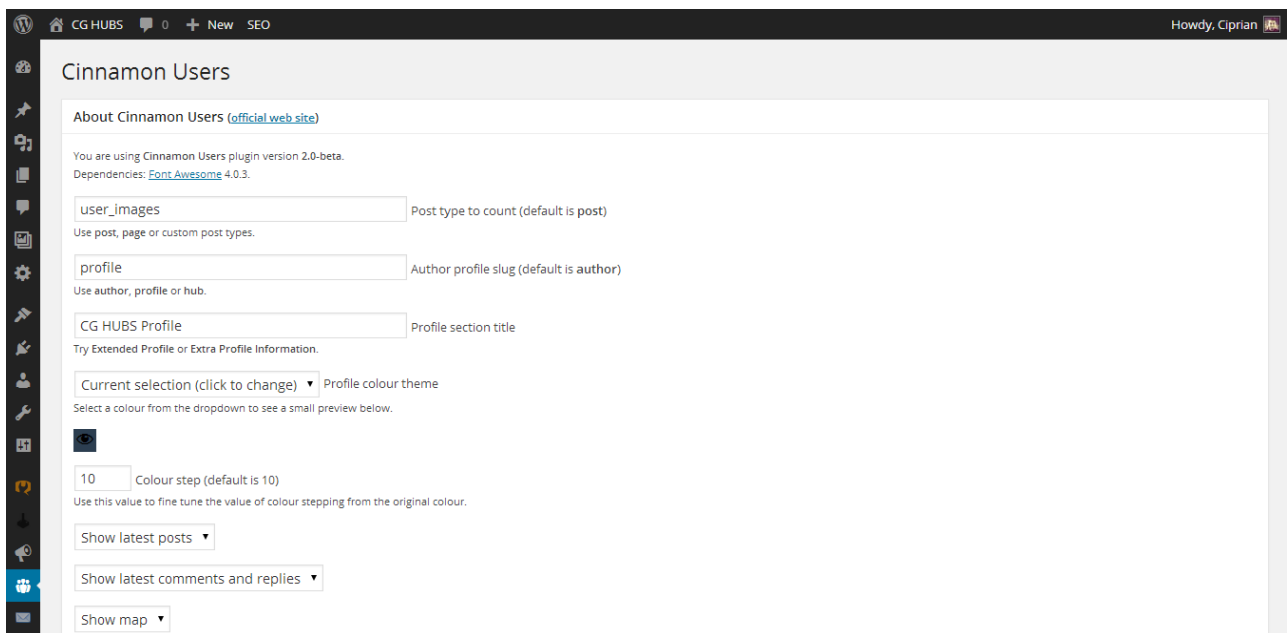

version 2.0-beta

Cinammon Users is a WordPress plugin which allows multi-author administrators to enhance users profiles. The plugin works for all kind of user roles, such as contributors, editors, authors, administrators and more. The plugin adds several custom fields, and enhances the `author.php` template. It also provides a shortcode to display the author profile on any post or page.

Cinnamon Users does not use any additional database resources and it plugs into the integrated WordPress engine. It allows for social profiles, Google Maps and custom avatar image.

Installation

1. Upload the **cinnamon-users** folder to your `'/wp-content/plugins/'` directory.
2. Activate the plugin via the Plugins menu in WordPress.
3. A new **Cinnamon Users** menu will appear in WordPress containing settings and options.

In order to view the Cinnamon profile, you need to create (or edit) the `author.php` file in your theme folder (`wp-content/themes/your-theme/author.php`) and add the following code:

```
<?php get_header(); ?>
```

```
<div>
    <?php
    // get author ID and echo shortcode
    $author = get_user_by('slug', get_query_var('author_name'));
    echo do_shortcode('[cinnamon-profile author=' . $author->ID . ']');
    ?>
</div>
```

```
<?php get_footer(); ?>
```

Note that you might need to adjust your HTML structure.

If you want to show a certain user profile on a page, use the `[cinnamon-profile author=17]` shortcode, where **17** is the user ID.

Note that, in some cases, you need to reset your Permalinks if you change the author profile slug. In order to do this, visit **Settings** -> **Permalinks** and click on **Save Changes** without changing anything.

Note #1: The plugin requires WordPress 3.8 or higher in order to use all features.

Features

- HTML5 compliant
- Works with all themes
- Responsive
- Ready to translate
