Cinnamon Boards | WordPress Plugin

version 3.2

Cinammon Boards is a WordPress forum plugin with a light footprint, responsive structure and user accessibility. The forum uses custom post types and all information is structured as a forum (categories, forums and topics). It can easily be integrated into any theme without losing any of its functionality.

Cinnamon Boards acts like a real forum, with categories, forums, topics, threads and messages, but it is heavily integrated into WordPress, taking advantage of the user/author system, Akismet and theme blending.

Cinnamon Boards works out of the box, with no options to set, except for the creation of categories and forums.

Installation

1. Upload the **boards** folder to your '/wp-content/plugins/' directory.
2. Activate the plugin via the Plugins menu in WordPress.
3. A new **Cinnamon Boards** menu will appear in WordPress containing all categories, forums and topics.

The installation procedure is simple. When you first install the plugin, a new empty page - **Forums** - is created with the shortcode tag `[display-forum]` inside. Feel free to add a custom template to this page.

If you want to use a different page for the forums, just place the `[display-forum]` shortcode in the desired page, however it is recommended to keep the current page. If you already have a `/forums/` page, the plugin will create a `/forums-2/` page, so it is recommended to delete any existing forum page and deactivate any forum plugin.

Usage

Use the links inside the plugin options to create your first category, then create one or more forums inside it.
