HotelPress | PHP Script

version 1.2

How to add a new booking

In order to add a new booking, go to NEW BOOKING page, select a room and add tourist details. Using the calendar controls, you can check for already booked dates or for existing vacancies. Booked dates appear in red.

The "Extra Booking Package Details" should contain more details, such as included breakfast, or pool access, or more tourist details.

How to view current bookings (for a selected day)

Go to **MANAGE BOOKINGS** and select a day from the date popup area. You will get a diagram of all rooms with booked ones marked with red.

How to add, remove or retire a room

The **MANAGE ROOMS** page helps you add new rooms, delete existing ones or retire rooms - mark as cleaning, repairing or simply unavailable. The retire action is designed as a brush icon.

A room can be simple, double or other specified types. If you want to add a new type, leave the existing types box empty and fill in the new room type. It will automatically be added to the list next time.

Bookings per room

The **BOOKINGS/ROOM** page is the opposite of the bookings-by-date page and displays all bookings for a selected room, past, present and future.

This page also allows you to cancel (remove) current bookings.

All configuration is done via the `/includes/config.php` file.

Features

- Responsive (smartphone, tablet compatible)
- HTML5 compatible/valid

Installation

1. Upload the **hotelpress** folder to your server (rename it as you see fit)
2. Import the attached .sql file in your database

3. Review the options and set the database information in `/includes/config.php` file
4. Start using the script
